

Multi beans are eligible for Auto-wiring

Could not autowire. There is more than one bean of 'EmployeeRepo' type.

Beans:

employeeRepoFileImpl (EmployeeRepoFileImpl.java)

employeeRepoMySQLImpl (EmployeeRepoMySQLImpl.java)

Resolve:

Option 1:

Using @Primary

@Repository

```
public class EmployeeRepoMySQLImpl implements EmployeeRepo {
```

@Primary

@Repository

```
public class EmployeeRepoFileImpl implements EmployeeRepo {
```

Option 2:

Using @Qualifier

@Service("app")

```
public class AppService {
```

    @Autowired

    @Qualifier("employeeRepoMySQLImpl")

```
    private EmployeeRepo employeeRepo;
```

For Constructor

@Service("app")

```
public class AppService {
```

```
    public AppService( @Qualifier("employeeRepoMySQLImpl") EmployeeRepo  
                        employeeRepo) {
```

```
        ...
```

```
    }
```

Option 3:

Using @Profile

a) Using properties file

`spring.profiles.active=dev`

@Profile("prod")

@Repository

```
public class EmployeeRepoMySQLImpl implements EmployeeRepo {
```

```
@Profile("dev")
@Repository
public class EmployeeRepoFileImpl implements EmployeeRepo{
```

b) Using Program Arguments

Higher Priority

Run -> Edit Configurations -> Active Profile : dev/prod

Option 4:

ConditionalOnMissingBean

```
@ConditionalOnMissingBean(name="employeeRepoMySQLImpl")
@Repository
public class EmployeeRepoFileImpl implements EmployeeRepo{
```
